

# Yaskawa Motoman MERIT Certification

The MERIT Program supports training for students and the industrial users. The MERIT Program provides the ability to develop a new program with the focus on robotics, or to expand an existing one.

For the industrial user, the MERIT Program offers a method to deliver the exact same training offerings to local manufacturers in a surrounding area. Once an instructor becomes certified in a specific training class, the instructor will be able to deliver the same curriculum as MTEC. Students receive the same class material and instruction as if attending MTEC. Upon successful completion of any MERIT delivered course, the student receives a certificate from Yaskawa Motoman. Certificates are endorsed by Yaskawa Motoman, and valid as prerequisites for any future advanced training classes within the respective controller group.
